FOR IMMEDIATE RELEASE

EVISIONGOLF SWING ANALYSIS TO BE DISTRIBUTED WORLD WIDE BY PROTEE UNITED

Swing Coach Rick Smith Provides You a Personal Lesson

FARMINGTON HILLS, Mich. - May 29, 2007 -- eVisionGolf Technologies, www.evisiongolf.com, has incorporated its swing analysis software into ProTee United's advanced Golf Simulator, www.protee-united.com, to produce a powerful new offering for consumers, the ProTee Golf Simulator with eVisionSim. One can play the course of their choice, view their swing, and have it analyzed for immediate feedback. The tools to truly improve one's game reliably are now available and can be used anytime of the year.

The system allows you to use your own clubs and set up to hit the shot just as you would on a real course. You can drive off the tee, hit fairway shots, pitch, chip, and putt the ball into the hole. After every shot, the system automatically flies along the ball's trajectory to where the ball lies, ready for the next shot. This can all be viewed on a large screen which uses a realistic 3d engine to accurately render any one of a number of beautiful golf courses you can select from.

Following any shot involving a full golf swing you can choose to view video of that swing, from either down the line or facing you, or both, and then have this analyzed. While video is one of the best forms of feedback in sports training, analysis of the video is even more valuable as it allows one to understand what they are doing wrong. The cameras capture your body stance and movement throughout the motion automatically identifying and reporting any swing faults found at a number of key positions. The lines showing ideal swing plane, hand/club location, head movement, etc... are automatically drawn. As part of the software, you can then have world renowned swing coach, Rick Smith explain each error in your swing and provide you drills to perform so you can overcome these faults, improving your game. Golfers swing videos, faults, and drills are then burned to a CD for the golfer to take home and practice. The eVision software, developed with the help of Rick Smith, can now provide automated personalized training or can be used in conjunction with a Golf Pro to provide a personalized training to address golfers unique build and swing faults.

"The synergy between our products is really great and allows us to provide a truly unique experience that the consumer just can't get anywhere else. ProTee has brought the simulator to the next level and together we have a remarkable training device that is also fun and exciting to use. Together the system provides all the key ingredients for a comprehensive training tool: feedback of the shot on the course, feedback of the actual swing, analysis of the swing to identify faults, and the drills to correct those faults. We can now give consumers training that several

years ago was only accessible to a select group of top tier players,” says Vin Sooch, President of eVisionGolf Technologies.

ProTee United President, Dennis Van Drie stated, “Our mission is to create the best simulators possible. We use a modular structure with separate components offered in any length, width, height and colour to meet our customers’ needs. At the heart of the system, we then apply leading edge technologies in graphics and sensors to deliver some of the most advanced simulators made today. The eVisionGolf swing analysis system is the type of breakthrough technology we strive to offer and a perfect fit for the ProTee simulators. We are truly excited to bring this to players around the world as it adds a whole new dimension to the experience.”

About eVisionGolf Technologies

eVisionGolf Technologies develops and distributes swing analysis software for the home, commercial, retail store, and Golf Pro market. They produce portable systems that provide automated analysis capable of operating in both indoor and outdoor environments.

About ProTee United B.V.

ProTee United B.V. develops, implements and maintains state-of-the-art golf simulation systems for customers and companies all over the world. Headquarter, showroom and worldwide distribution center are all located in Zaltbommel, The Netherlands.

The ProTee Simulator with eVisionSim includes automated swing analysis and Rick Smith drills. It is available in both a home and commercial version. If interested in purchasing please contact:
